

StrengthWise

The AI strength coach that knows your sport,
remembers your history, and cites its sources.

YOUR DATA

=

CITED COACHING

Anar Shyraliiev April 2026 Grip Sport · Armwrestling · Powerlifting

Niche athletes train hard. Their data works against them.

Data trapped in spreadsheets

Years of training logs — sets, reps, RPE, notes — that never surface insights automatically.

Generic AI forgets everything

ChatGPT gives generic advice, knows nothing about gripper closes or armwrestling pronation, and forgets after every session.

Coaching knowledge stays siloed

Powerlifting periodization that works for grip peaking — no tool makes that cross-domain connection.

Logging friction kills consistency

Anything over 60 seconds per session gets abandoned. Most apps take 3–4 minutes.

RAG

Every competitor is missing at least two dimensions.

TOOL	NICHE SPORT DEPTH	PERSONAL MEMORY / RAG	KNOWLEDGE BASE RAG	FREE TIER
⚡ StrengthWise	♦ YES	♦ YES	♦ YES	♦ YES
ChatGPT / Claude	× No	× No	× No	✓ Yes
Juggernaut AI	~ Powerlifting only	× No	× No	× No
Whoop Coach	~ Partial	✓ Yes	× No	× No
Renaissance Periodization	~ Powerlifting only	× No	× No	× No
TrainHeroic	~ Partial	× No	× No	× No
Strong / Hevy	× No	× No	× No	✓ Yes
ArmProgress	✓ Armwrestling	× No	× No	✓ Yes
GripBoard Community	✓ Yes	× No	× No	✓ Yes
Fitbod / MyFitnessPal	× No	~ Partial	× No	✓ Yes

The gap: No tool occupies all four YES columns simultaneously. StrengthWise is the only one — by design.

Dual-source RAG coaching, built for athletes who train alone.

01 Dual-Source RAG

Every answer fuses your personal training history (DynamoDB sessions) with a curated strength science knowledge base (FAISS). Both sources are cited in the response.

02 Persistent Memory That Compounds

Your data accumulates across sessions. Confidence level improves with every log: "Based on 3 sessions..." → "Based on 60 sessions, a clear pattern shows..."

03 Niche Sport Depth

Knows gripper closes, hub lifts, AW pronation/supination, powerlifting peaking cycles. Cross-domain transfer: PLing periodization → grip programming.

"Why did my grip close stall in the last cycle?"

YOUR DATA

Your last 3 sessions show consistent RPE 9–10 on gripper closes with no volume reduction — classic accumulation without deload. Your session on Mar 14 hit 8×3 at 10 RPE.

TRAINING SCIENCE

Grip-specific fatigue accumulates faster than lower-body strength (Zatsiorsky, 2006). A 5–7 day deload at 40% volume is recommended after 3+ weeks of high-RPE grip work.

Serverless by design. Zero idle cost.

One query. Two sources. One cited answer.

Freemium with metered AI coaching. Zero cost for the core habit.

FREE FOREVER

\$0

- ✓ Unlimited session logging
- ✓ 3 AI queries / day
- ✓ Full dual-source RAG quality
- ✓ Sport-native exercise library
- Export to CSV / PDF
- Unlimited queries

Onboarding: 10 queries / day for first 7 days

PREMIUM

\$7–10 / month

- ✓ Everything in Free
- ✓ Unlimited AI queries
- ✓ CSV + PDF export (roadmap)
- ✓ Priority response queue

Upgrade = one Cognito group change.
Rate limiting already implemented.

TEAM / COACH

ROADMAP

TBD

- ✓ Multi-athlete management
- ✓ Coach dashboard & analytics
- ✓ WAF/IFA integration
- ✓ White-label API

Phase 2 — B2B pivot after community traction.

Strategic insight: Logging is \$0 LLM cost — it builds the habit and personal data moat. AI queries are the monetized layer. A serious competitive athlete spending \$7/month on coaching is well below the pain threshold.

Break-even at 12 paying users. Profitable at 25.

12-MONTH CONSERVATIVE MODEL

500

PAYING SUBSCRIBERS

MONTHLY COST STACK

Lambda (pay-per-request)	~\$5
DynamoDB (on-demand)	~\$8
Gemini API (main variable cost)	~\$40
CloudFront + S3	~\$12
Cognito (MAU)	~\$5
Miscellaneous	~\$20
Total	~\$90/mo

Break-even: 12 paid users ($\$90 \div \7.50). With 25 users: **\$187.50 revenue vs \$90 costs = 54% margin.**
At 5,000 users with the same architecture: margin approaches **80%** — Gemini API is the only meaningful variable cost. No re-architecture needed.

5 KPIs. Each with a measurement methodology.

Community-first growth.

Architecture that scales without re-engineering.

PHASE 1 — 3 TO 6 MONTHS

- M1 • Public Launch**
Deploy to AWS. Seed with 13 historical cycles as demo content. Post to r/GripTraining, r/armwrestling, GripBoard.
- M2 • Community Feedback Loop**
100 active users milestone. Weekly feedback sessions with grip and AW competitors. Iterate on exercise library.
- M3 • Structured Onboarding**
Sport selector → auto programming recommendation. Reduce time-to-aha-moment from session 3 to session 1.
- M4–6 • Analytics + Export**
Performance dashboard, CSV/PDF export, 500 users milestone, Stripe integration for premium.

PHASE 2 — 1 TO 2 YEARS

- Y1 • v2 Feature Layer**
Voice logging, XLSX bulk import, automated program generation, HRV/wearable integration, proactive pattern alerts.
- Y1 • B2B Pivot**
Coach dashboard, multi-athlete management, WAF/IFA governing body partnerships, white-label API for gyms.
- Y2 • Platform Expansion**
Multi-region DynamoDB, multi-model support (fine-tuned open models), competition tracking, community features.

500

users → profitable
12 paid = break-even

5K

users → hire 1 FTE
invest in wearables

50K

users → B2B pivot
institutional licensing

LIVE DEMONSTRATION

Let's see it live.

"Ask it something your coach never could."

" Why did my grip stall in the last cycle? "

" Design a 4-week AW program from my history "

" Compare my RPE trends to periodization science "

Questions?

- Deployed on AWS — CloudFront, Lambda (Docker), DynamoDB, Cognito, S3
- Zero fixed cost — every component is pay-per-request
- The only tool with niche sport depth + personal memory + knowledge RAG
- Break-even at 12 paying users (\$90 / \$7.50 ARPU)
- 5 measurable KPIs with existing instrumentation in the codebase

LIKELY QUESTIONS

Why Gemini? Google AI Studio free tier + lower inference cost at scale vs Claude

FAISS vs Pinecone? FAISS in Lambda /tmp = zero per-query vector DB cost

Data privacy? userId = Cognito UUID — no PII in training logs

Cold start? FAISS loads ~80MB from S3 on cold start, stays in /tmp after
